

Sample command lines follow. All these commands are run from InputOrbit;

Plot the historical data:

```
bash-3.2$ python3 ../orbits.py wds16289+1825_edit.txt --show
```

Plot the historical data, load weights and run Optimization:

```
bash-3.2$ python3 ../orbits.py wds16289+1825_edit.txt --weights  
WDS16289+1825_edit_weights.csv --optimize --show
```

Plot the historical data, load weights, filter data. and run Optimization:

```
bash-3.2$ python3 ../orbits.py wds16289+1825_edit.txt --weights  
WDS16289+1825_edit_weights.csv --optimize --max-residual-mas 300 --  
show
```

How to get help:

```
bash-3.2$ python3 ../orbits.py --help
```
